

True or False | Write True if the statement is valid, else write False.

1. False Another important file in the values folder is the values.xml where all the themes of the Android project are defined
2. False drawable-hdpi has the highest resolution
3. True The dimens.xml is used for defining the dimensions for different widgets to be included in the Android project.
4. False The res/layout folder contains launcher.xml files to define icons that are used to show on the homescreen.
5. True It is a good coding practice to use dimens.xml to define a dimension rather than just writing the dimension in the resource.
